Erythrocyte Pyruvate Kinase Deficiency (PK deficiency) is an inherited, autosomal recessive, hemolytic anemia. Breedings between carriers will be expected to produce 25% affected kittens. Go to our website for a list of breeds at risk of PK deficiency due to a significant frequency of the mutation.

vgl.ucdavis.edu/test/maine-coon-hcm

The MHCM test only detects the A31P mutation associated with HCM in Maine Coon cats and outcrosses as described by Meurs et al. 2005. The A31P mutation is not the sole cause of HCM in Maine Coons. The other causes are not known at this time.

Feline AB Blood Group

The feline AB blood group test is designed to detect specific genetic variants that result in blood types B and AB. The absence of those variants is reported as N.

In most cases, the N allele corresponds to the common, unchanged gene that results in blood type A. However, occasionally, one or both N alleles may correspond to a rare and yet unknown AB and/or B type allele. Since these are unknown, there is no way to test for them.

The table below shows the resulting blood type for each possible genotype reported.

Genotype	Blood Type
N/N	Most likely A
N/c	Most likely A
N/b1	Most likely A
N/b2	Most likely A
N/b3	Most likely A
c/c	AB
c/b1	AB
c/b2	AB
c/b3	AB
b1/b1	B
b1/b2	B
b1/b3	B
b2/b3	B

For more detailed information about the feline AB Blood Group test, please visit our website at https://vgl.ucdavis.edu/test/bloodgroup-cat
